EQUINE VITAMIN C

- An antioxidant formula for horses.
- Vitamin C is an essential water-soluble antioxidant formula for horses that supports circulation, the immune system, and cardiovascular function.
- **Equine Vitamin C** is 100% pure Ascorbic Acid (Vitamin C) and is an excellent complement to the horse's diet as Vitamin C neutralizes free radicals during times of stress, injury and illness.
 - Free radicals contribute to many of the health problems that are associated with aging. As horses age, their plasma levels of Vitamin C decrease and their immune system becomes less efficient. **Equine Vitamin C** is a powerful free radical scavenger that protects the body's cells and supports the immune system.
- Recommended for: joint, cardiovascular, and periodontal support, as well as stressed, geriatric, injured or immune compromised horses.
- Vitamin C is required for production of hormones, catecholamines, steroids, epinephrine (adrenaline), cortisone, and the synthesis of interferon, cholesterol, hemoglobin, and carnitine.
- Vitamin C supports tissue growth and vascular walls. It also supports maintenance of healthy gums.
- Vitamin C is required for production of collagen and other structural elements of connective tissue in cartilage and joint health (like elastin, fibronectin, proteoglycans, and bone matrix).
- Vitamin C assists in the absorption, transport, and storage of iron and calcium.
- Vitamin C is also important for the formation of folic acid and the metabolism of amino acids and B vitamins.
- Stress, illness, injury and heavy exercise can result in loss of Vitamin C. Horses on anti-inflammatory medication, corticosteroids or antibiotics also may have depressed levels of Vitamin C.
- **Directions For Use:**
Give one scoop daily. During times of increased stress give up to 2 scoops daily.
- **Equine Vitamin C**
0900146.001 1 lb (64 Servings)

EQUINE VITAMIN C Active Ingredients Per 9 CCScoop: Ascorbic Acid (Vitamin C) 7,088 mg Inactive Ingredients: none.
