GLYCO-FLEX® CLASSIC - 300 MG & 600 MG

- Formulas to support proper joint and connective tissue function in dogs.
- **Glyco-Flex® Classic for Dogs** products are comprehensive formulas for the support of joint and connective tissue functions in dogs at any stage of life. **Glyco-Flex® Classic** offers your dog an effective line of defense, by supporting existing “healthy” tissue and joints. Because age, breed, diet, lifestyle, injury, and stress can affect the health of any joint’s structure and function, we offer two distinct products designed to meet the needs of your dog throughout its life.
- **Glyco-Flex®** products for Dogs contains Perna to optimize your dog’s joint structure, while at the same time providing the building blocks necessary to support normal cellular functions. *Perna canaliculus* is an edible species of shellfish from New Zealand that has been freeze-dried. Perna provides many of the factors necessary to maintain healthy connective tissue. It is rich in amino acids, polypeptides, naturally chelated minerals, fatty acids, glycosaminoglycans (GAGs), vitamins, glycoproteins, protein complexes, polysaccharides and the nucleic acids RNA and DNA. Perna contains all major classes of GAGs including Chondroitin –4- and –6- Sulfates and Hyaluronic Acid that occur in connective tissue such as joint cartilage, tendons, ligaments, and synovial fluids. The Perna used in our **Glyco-Flex®** products is the GlycOmega™ brand *Perna canaliculus* exclusive to **Vetri-Science® Laboratories**.
- **Recommended for support of:**
 - Joint health maintenance program for puppies and dogs throughout their lives
 - Sperm motility
 - Skin and vascular health
 - Bladder and gut health
 - Immune system
- **Safety and Quality Control:**
 - GlycOmega™ brand *Perna canaliculus* from New Zealand is grown under strict quality control conditions that permit optimal harvesting and processing so that none of its valuable nutrients are destroyed or inactivated.
 - Each batch of raw material must pass the strict quality control guidelines of the New Zealand Ministry of Fisheries before it can be released for export.
 - All **Glyco-Flex®** products are produced under strict quality control measures including analysis of raw material and finished product.
 - **Vetri-Science® Laboratories** follows Good Manufacturing Practices (GMP).
 - **Glyco-Flex®** products have been shown to be safe. (Safety studies and research available upon request)
 - **Vetri-Science® Laboratories** has been setting standards in animal joint health products since 1980.

Dogs love the taste of our **Glyco-Flex® Classic** Chewable tablets, and you’ll love the ease! Available in two potencies: **Glyco-Flex® Classic - 300 mg** for small dogs, and **Glyco-Flex® Classic - 600 mg** for large dogs.
