Coenzyme Q₁₀ is recommended for supporting cardiovascular and periodontal health.

Coenzyme Q₁₀ is found in the mitochondria, the chemical factories of all cells where energy is made. Hundreds of mitochondria are present in each cell and are most highly concentrated in periodontal, heart, and liver tissue. CoQ₁₀ enhances the formation of ATP (Adenosine Triphosphate), the basic energy molecule used by every cell.

CoQ₁₀ is found in the highest concentration in “high energy” organs, such as the brain, heart, muscles, liver, kidneys, and pancreas. It is a powerful antioxidant and immune enhancer.

CoQ₁₀ can support the cellular energy necessary for heart health (ailing hearts are often deficient in CoQ₁₀) and helps carbohydrate metabolism support blood sugar balance.

Recommended for:
» Periodontal health (deficiencies of CoQ₁₀ have been linked to poor gum health)
» As an adjunct for animals with recurrent or persistent mouth and gum concerns
» Enhanced energy production for a healthy immune response
» Cardiovascular support
» Carbohydrate metabolism
» Oxygen utilization
» Support of circulation, physical energy and stamina
» Liver support and normal detoxification
» Geriatric animals (levels of Q₁₀ in the body decline with age)

Available as a dry capsule. The two-piece capsule dry formulation is available in two potencies: a 10 mg capsule for small pets and in a 30 mg capsule for larger pets.

**ACTIVE INGREDIENT PER CAPSULE:**

Coenzyme Q₁₀ .......................... 10 mg

Inactive Ingredients: cellulose, maltodextrin, silicon dioxide, vegetarian leucine.
