

CLASSIC 600 MG » A GlycOmega™ Perna product for joint and connective tissue support

Formulas to support proper joint and connective tissue function in dogs.

GlycoFlex® Classic for dogs features a comprehensive formula for the support of joint and connective tissue functions in dogs at any stage of life. **GlycoFlex® Classic** offers your dog an effective line of defense, by supporting healthy tissue and joints. Because age, breed, diet, lifestyle, injury, and stress can affect the health of any joint's structure and function, we offer two distinct products designed to meet the needs of your dog throughout its life.

GlycoFlex® products contain GlycOmega™ brand *Perna canaliculus* to optimize your dog's joint structure, while providing the building blocks necessary to support normal cellular functions. *Perna canaliculus* is an edible species of shellfish from New Zealand that has been freeze-dried to provide full health benefits. Perna is rich in amino acids, polypeptides, naturally chelated minerals, fatty acids, glycosaminoglycans (GAGs), vitamins, glycoproteins, protein complexes, polysaccharides, and the nucleic acids RNA and DNA. Perna contains all major classes of GAGs, including chondroitin -4- and -6-sulfates, and hyaluronic acid, which naturally occurs in connective tissue and synovial fluids.

Recommended for:

- » Maintaining joint health in puppies and adult dogs
- » Sperm motility support
- » Supporting skin and vascular health
- » Maintaining bladder and gut health
- » Immune system support

Safety and quality control:

- » GlycOmega™ brand *Perna canaliculus* from New Zealand is grown under strict quality control conditions that permit optimal harvesting and processing so that none of its valuable nutrients are destroyed or inactivated.
- » Each batch of raw material must pass the strict quality control guidelines of the New Zealand Ministry of Fisheries before it can be released for export.
- » All **GlycoFlex®** products are produced under strict quality control measures including analysis of raw material and finished product.
- » **GlycoFlex®** products have been shown to be safe (safety studies and research available upon request).
