VETRI LYSINE PLUS »

Lysine and DMG for immune system support

Vetri Lysine Plus is an immune system support formula designed with a highly palatable delivery system.

Vetri Lysine Plus supports:

- Immune system function
- Collagen formation
- Tissue repair
- Antioxidant activity
- Antibody and lymphocyte production

About the ingredients:

- L-lysine is an amino acid that supports antibody, hormone, and enzyme production.
- It also supports collagen formation and tissue repair.
- L-lysine competes with L-arginine, which is the amino acid required by the herpes virus to replicate.
- DMG is an intermediary metabolite, which is a substance that is rapidly broken down into other vital substances in the body.
- DMG provides useful building blocks, including methyl groups that support the production of vitamins, hormones, neurotransmitters, antibodies, nucleic acids, and other metabolically active molecules. Animals produce DMG in small amounts, and research indicates that supplementing with DMG enhances oxygen utilization at the cellular level, as well as supports the immune response with antibody and lymphocyte production.
